Swisscom my cloud desktop app mac

If you lose your phone or your laptop gets damaged, your data is safe in the cloud. Photos, videos and data are backed up outside your devices. Access them any time from any device, anywhere in the world. The Mac operating system contains one desktop space by default, but users can establish multiple desktop spaces that are identified as Desktop 1, Desktop 2, and so on. All the desktop spaces are accessible through the Mission Control icon on the Dock. You can opt to designate which of the desktops (or all of them) each application opens in. This feature is helpful for people who use multiple spaces for specific uses. For example, a desktop used primarily for working with correspondence might have Mail, Contacts, and Reminders open. Perhaps a space for working with photos would be the home for Photoshop, Aperture, or Apple's Photos app. The way you organize and make use of your desktop spaces is up to you, but as you work with the desktops in Mission Control, you're likely to run into apps that you want to have opened in all of your active spaces. You can set apps to open in all the spaces so that when you switch between desktops, the same apps are available on all of them, in addition to the ones you assigned to specific desktops. Information in this article applies to the following operating systems: macOS Catalina (10.15), macOS Mojave (10.14), macOS High Sierra (10.13), macOS Sierra (10.12), OS X El Capitan (10.11), OS X Yosemite (10.10), OS X Mavericks (10.9), OS X Mountain Lion (10.8), and OS X Lion (10.7). Being able to assign an app to a space first requires setting up multiple desktop spaces. You do this using Mission Control. To add multiple desktop spaces to your Mac: Click the Mission Control icon in the Dock to open the Spaces bar at the top of the Mac display. Click the plus sign to the far right of the Spaces bar to add additional desktop spaces. To switch between multiple desktops, click the Mission Control icon in the Dock and select the preferred desktop in the Spaces bar that appears at the top of the screen. After you set up multiple desktop spaces, you can assign an application to appear on one or all of your desktops when it opens. Its icon must appear on the Dock for you to assign it, but it doesn't have to stay on the Dock after it is assigned. You can remove an assigned application from the Dock, and it still opens in the desktop space or spaces you assign it to, regardless of how you launch the application. If you want an application to appear on all your desktop spaces whenever you open it: Right-click the Dock icon of the application you want to be available in every desktop space you use. From the pop-up menu, select Options. Choose All Desktops in the submenu. The next time you launch the application, it opens in all your desktop spaces. If you change your mind later and want to remove the chosen application from all the desktop spaces, right-click the Dock icon for the app and select Options > None to remove it. Then, the next time you launch the application, it opens only in the currently active desktop space. When you want to assign an application to a specific desktop space, rather than to all of them: Go to the desktop space where you want the application to appear. If it isn't the current desktop you are using, open Mission Control and click the desired desktop space in the Spaces bar near the top of the screen. Right-click the Dock icon of the application you want to assign to the current desktop space. From the pop-up menu, select Options. Click This Desktop in the submenu. Assigning apps to specific spaces or to all spaces can help you keep a tidy desktop, and create a better workflow. Thanks for letting us know! Tell us why! Photo Courtesy: Future Publishing/Getty Images If you have a new phone, tablet or computer, you're probably looking to download some new apps to make the most of your new technology. Short for "application," apps let you do everything from listening to music to syncing your phone to your car to playing games. With so many apps to choose from, however, it can be a bit daunting if you don't know how to download them. Fortunately, downloading apps can be quick, simple and easy regardless of the kind of technology you're using. Read on to learn about how and where to download apps. How Downloading Apps Works When you download a file on the net, whether from a store or elsewhere, a file hosted on an online server is copied onto your computer. If you've ever been online, either on a phone or computer, you've likely already downloaded files on many occasions. Apps are no different — they're just specific kinds of files you download from the internet. Photo Courtesy: Scott Barbour/Getty Images Apps are typically set up as executable (.exe) files, although apps meant for Apple devices often come as either APP (.app) or DMG (.dmg) files. Sometimes (especially when it's meant for computers), an app is compressed into a ZIP file (.zip or .zipx) to save space. To do this, you may need another program, such as WinZip or 7-Zip, to open it, although you may also be able to open it by left- or right-clicking if your device came with the ability to open ZIP files. In many cases, however, downloading an app is as simple as clicking a button on an app's page. As long as there's enough space left on your device, the app will likely be ready for use once it's done downloading. Apps From Google Play Android is an operating system used for phones, tablets and more. Odds are that if your phone isn't an iPhone, it's probably an Android device — brands include Samsung, Huawei, LG, Motorola, ZTE and many more. To download apps for an Android device, you can either visit the Android website or use the Google Play app. (It's often pre-installed on phones and tablets, so you may already have it.) Be aware that you'll likely be prompted to sign in with your Google account or create one if you haven't already. Photo Courtesy: SOPA Images/Getty Images Open the Google Play store on your device and then search for the specific name of the app or any broader category that might interest you. Click on the app result to learn more about it. If the app is free, it should begin to download; if not, you'll be prompted to pay for it. Either way, once the file is downloaded, you're good to go. Downloading Windows Apps Microsoft hosts apps on its website, which you can access via any device with a web browser. You can use the site to download apps for tablets, computers, phones, Xbox consoles, virtual reality sets and more, so it's important to check the system requirements on each app's page to ensure that the app is compatible with your device. Photo Courtesy: Kim Kulish/Getty Images Select whichever free or paid app you're interested in to see a brief description of the app. If you choose a paid app, you'll be prompted to enter your credit card information or a gift card to complete your order. Using the Apple App Store The Apple App Store hosts apps designed for iPhones, iPads and other Apple devices. As with Google Play, it's often pre-installed on phones. Like other app stores, it lets you filter apps by category, including featured apps, newest apps, popular apps, themed categories and more. Choose the app you want and follow the onscreen directions to download it to your device. You'll need to log in or create an account complete the purchase. Photo Courtesy: Picture Alliance/Getty Images MORE FROM QUESTIONSANSWERED.NET My Cloud Home - Personal Cloud Storage My Cloud Home When I start the myCloud desktop app on Windows 10, it welcomes me and says, Login Now, which seems like a great idea. The next screen than offers the opportunity to log in directly with something called Swisscom Login. So, I select "Let's go", and go to a login screen. No matter what I try works here. I enter the same email I use with mycloud.com and the same password. No go. If I select forgotten username, it ask for an email and then sends me an email saying there is no of my existence. (Hard on the ego.) At no time does it offer a way to create an account. If I can't log into Swiss, apparently I can't use the Desktop app. Do I detect a null loop here? Hi @jimbarclay, Please refer to the below article Remote Access - MyCloud.com Device Offline or Cannot Connect to My Cloud; Remote Access - MyCloud.com Device Offline or Cannot Connect to My Cloud I do not understand this response. I can access my My Cloud Home using file explorer. I can't use the My Cloud desktop app because it wants me to log onto something called Swisscom, and I don't have an account for that. When I try it says I'm using the wrong user name or password, which makes sense because I don't have an account, but it does not offer me a way to register for an account. jimbarclay: he next screen than offers the opportunity to log in directly with something called Swisscom Login. So, I select "Let's go", and go to a login screen. No matter what I try works That should have given you a hint that you have the wrong app. Swisscom has an app called myCloud Desktop which has nothing to do with WDC's MCH. You have to get the right app from reading the manual or a search of this forum and not from mycloud.ch (wrong location). The desktop app for your My Cloud Home (MCH) is called WD Discovery. Don't confuse other My Cloud with this particular version for the 'Home'. Download and Install WD Discovery Full Version Answer ID 28762 This is what happened when you tried to download from the wrong site, don't do this:
